

The ProjectSight mobile phone and iPad apps allow general contractors and their subcontractors to effectively and efficiently manage the project from the construction site. Available on both Android and iOS, the app allows them to maximize the ability for construction projects to be built correctly and on schedule.

Highlights

- Easy to use interface tailored to the Project and Field Engineers
- Integrated with your ProjectSight web project and portfolios to ensure data integrity
- Offline functionality allows you to access your project information at all times
- Punch module - allows users to create, update and resolve punch items from the field
- Drawings module - allows users to access all project drawings and revisions on their phone

Drawings Module

With ProjectSight mobile, you have access to all project and construction drawings instantly. You no longer need to run between the site and construction trailer to get new drawings or revisions. When a new drawing or revision is added to the project, you can access them at all times on your device. The value we provide means that whenever a subcontractor has a question, the project manager has the tools to easily provide an answer. This builds credibility and ensures that the construction doesn't stall due to uncertainty.

Punch Module

ProjectSight mobile is changing the way Punch items are created from the site. No more colored tape and notepads. You can simply pull out your mobile device, snap a picture of an issue, describe the issue, and assign it to be resolved. This efficient and accurate process saves time and money for the general contractor. Punch items can be captured quicker and more accurately meaning issues no longer go unnoticed and unresolved.

Less Emails

ProjectSight mobile allows subcontractors to comment on a punch item they are assigned to, request further information or to indicate that the issue is resolved. The project manager has complete visibility into the comment history and audit log meaning less time spent monitoring your email.
